Information & Remarks (strictly to observe):

No fastening material included. Longer wheel screws have to be ordered separately

Important information about the required wheel bolts

No mounting hardware is included with this wheel spacer kit. The required shank length of the new wheel bolts is calculated as follows:

Shank length of the original wheel bolt + thickness of the wheel spacer = required shank length of the new wheel bolt

Examples:

Original shank length: 27mm + wheel spacer thickness: 5mm = required new shank length: 32mm

Original shank length: 30mm + wheel spacer thickness: 10mm = required new shank length: 40mm

The thread size, seat type and hex size must match the specifications of the vehicle and the wheels being used.

For vehicles equipped with wheel nuts, correspondingly longer wheel studs are required.

Suitable wheel bolts are available at: https://www.swisstuning.ch/wheel-bolts-c-2777_4274.html
